The G-ranks and the S-ranks listed in this checklist are from the British Columbia Conservation Data Centre (CDC). They give the status of the species globally (G-rank) and the status of the species in British Columbia (the S-rank). Ranks of 1 are for species in the most perilous condition, 5 for species that are secure.

This list is based on an earlier version compiled by Leah R. Ramsay and David F. Fraser that included species for all of Vancouver Island and the Gulf Islands.

<sup>\*</sup> are species that are not common in our area despite their overall rank
