

New Electric Zamboni comes to G.R. Pearkes

GR Pearkes is excited to announce we received delivery of our brand new Electric Zamboni. This Zamboni has replaced our Propane powered Ice Resurfacers.

Both the staff and community are excited to have this new "Toy" in action. This machine replaces an older unit, which repair, maintenance and downtime was beginning to impact community ice use.

Each year we estimate our Zamboni fleet drives the equal distance of Victoria to Halifax. With this shift, from Propane to Electric power will save 5.7 tonnes of GHG per year.

This is on top of the 36 tonnes of GHG we anticipate to save with REALice upgrade which was completed and reported on in December.
